

Green Belt – Lean Six Sigma

Description

Lean Six Sigma Methodology Optimizes Your Production Processes

Lean Six Sigma Green Belt is a method that relies on a collaborative team effort to improve performance by systematically eliminating waste and reducing variations. This methodology includes several levels of training, with the Yellow Belt (beginner level), the Green Belt (intermediate level), and the Black Belt (advanced level).

We prepare you for the IASSC Certified Lean Six Sigma Green Belt exam.

After a brief review of the concepts covered during the Yellow Belt certification, the training continues by providing a deep understanding of the “Analyze,” “Improve,” and “Control” phases of the Lean Six Sigma methodology. Indeed, the Green Belt’s role is to implement the methodology and support the Black Belts in carrying out process improvement projects.
